

de la Rosa et al., Vol. 111, No. 6, Pt. 2, 3087-3096.

Due to an author's error Fig. 2 was incorrectly reproduced. The corrected figure appears below.

L1: NH <sub>2</sub> -	I	Q	I	P	D	E	Y	K	G	H	H	V	L							
G4: NH <sub>2</sub> -	I	T	I	P	P	E	Y	G	A	H	D	F	L	L						
BRAVO: NH <sub>2</sub> -	L	T	V	P	L	D	S	K	L	?	E	?	S	Q	P	P	P	V	I	D

**Figure 2.** Comparison of the NH<sub>2</sub>-terminal sequences of the axonal surface proteins L1, G4, and Bravo. The sequences of L1 and G4 have been taken from Moos et al. (1988) and Rathjen et al. (1987b), respectively. The sequence of Bravo was determined as described in Materials and Methods. Identical residues are squared. Note also that several nonidentical residues are functionally similar and suggest relatedness (e.g., isoleucine/leucine, glutamate/aspartate).
