

Fleig et al. Vol. 151, No. 5, November 27, 2000. Pages 1101–1111.

On page 1105 of Fleig et al., the sentence “The terminal phenotype of the *spi1-25* strain is clearly different from the *spi1* null strain, but the Spi1p protein levels are similar (data not shown), suggesting that Spi1-25p might be a separation of function mutant that retains normal interactions with some but not all binding partners” is incorrect. The correct version appears below:

The terminal phenotype of the *spi1-25* strain is clearly different from the *spi1* null strain, but the Spi1p protein level is normal (data not shown), suggesting that Spi1-25p might be a separation of function mutant that retains normal interactions with some but not all binding partners.
