

Vladimir I. Titorenko and Richard A. Rachubinski
Vol. 164, No. 5, March 1, 2004. Pages 641–645.

This article originally appeared with errors in the legend to Fig. 1 and the Acknowledgments. The correct text is printed below.

Figure 1. **Strategies and molecular mechanisms for the involvement of peroxisomes in development, differentiation, and morphogenesis.** See text for details. The peroxisome and the nucleus are colored blue and green, respectively. ABC, ATP-binding cassette; HDAC1, histone deacetylase 1; PPAR, peroxisome proliferator-activated receptors; RAR, retinoic acid receptor; ROS, reactive oxygen species, including hydrogen peroxide, superoxide radicals, and nitric oxide; VLCFA, very long-chain fatty acids.

Acknowledgments

This work was supported in part by grants from the Canadian Institutes of Health Research to V.I. Titorenko and R.A. Rachubinski and by a grant from the Canada Foundation for Innovation to V.I. Titorenko. R.A. Rachubinski is an International Research Scholar of the Howard Hughes Medical Institute and Canada Research Chair in Cell Biology.
