

Quantitative analysis of autophagy-related protein stoichiometry by fluorescence microscopy

Jiefei Geng, Misuzu Baba, Usha Nair, and Daniel J. Klionsky

Vol. 182 No. 1, July 14, 2008. Pages 129–140.

In Table I, “ 272 ± 9 ” is reported as the number of Atg8 molecules at the PAS, but this value refers to starvation conditions. For growing conditions, the correct amount of Atg8 at the PAS is 116 ± 7 molecules. Similarly, in Fig. 6 A, the box-plot showing the amount of Atg8 at the PAS refers to starvation conditions. The authors apologize for this error and for any inconvenience.
