

Nuclear envelope morphology constrains diffusion and promotes asymmetric protein segregation in closed mitosis

Barbara Boettcher, Tatiana T. Marquez-Lago, Mathias Bayer, Eric L. Weiss, and Yves Barral

Vol. 197 No. 7, June 25, 2012. Pages 921–937.

In Fig. 2 A the bottom right image was mislabeled. The correctly labeled image appears below.

The html and pdf versions of this article have been corrected. The error remains only in the print version.

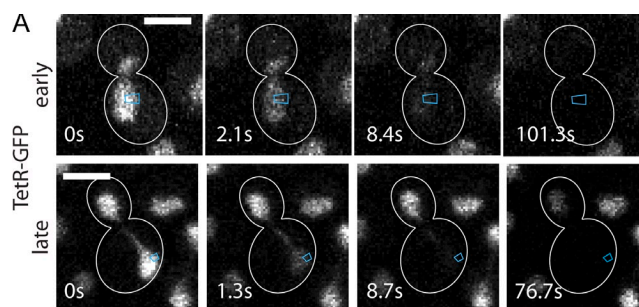

Figure 2. The nucleoplasm of a dumbbell-shaped nucleus is compartmentalized. (A–D) FLIP experiments on indicated reporter proteins during early and late stages of nuclear division. Bleaching area is indicated in blue. White lines indicate cell outlines. Bars, 3 μ m.
