

# Correction: TspanC8 tetraspanins regulate ADAM10/Kuzbanian trafficking and promote Notch activation in flies and mammals

Emmanuel Dornier, Franck Coumailleau, Jean-François Ottavi, Julien Moretti, Claude Boucheix, Philippe Mauduit, François Schweisguth, and Eric Rubinstein

Vol. 199 No. 3, October 22, 2012. Pages 481–496.

The authors recently discovered inadvertent duplication of figure panels in Figs. 4 A and S4 A. These duplications occurred during the process of figure compilation. The authors provided the journal with the correct original representative data and replicates. These data confirm that correcting these duplications does not impact the interpretation of the figure or the conclusions of the paper. The authors apologize for the error.

The HTML and PDF versions of the article have been corrected. The error remains only in the print version.

**Figure 4. Expression of TspanC8 in HeLa cells increases the expression of surface and mature ADAM10.** (A) Flow cytometry analysis of the surface expression of ADAM10 in HeLa cells transiently transfected with the indicated GFP-tagged tetraspanins. (B) Western blot analysis of mature ADAM10 and GFP-tagged tetraspanins in transfected HeLa cells. A nonspecific band is indicated by an asterisk. (C) After biotin labeling of surface proteins, HeLa cells stably expressing or not GFP-tagged Tspan5, Tspan14, and Tspan15 were lysed and the interaction of ADAM10 with the transfected tetraspanins was analyzed by coimmunoprecipitation and Western blot. The major 68-kD band revealed by the anti-ADAM10 mAb perfectly overlapped with the band labeled ADAM10 in the top panel. A nonspecific band is indicated by an asterisk. All experiments were performed at least twice with similar outcome.

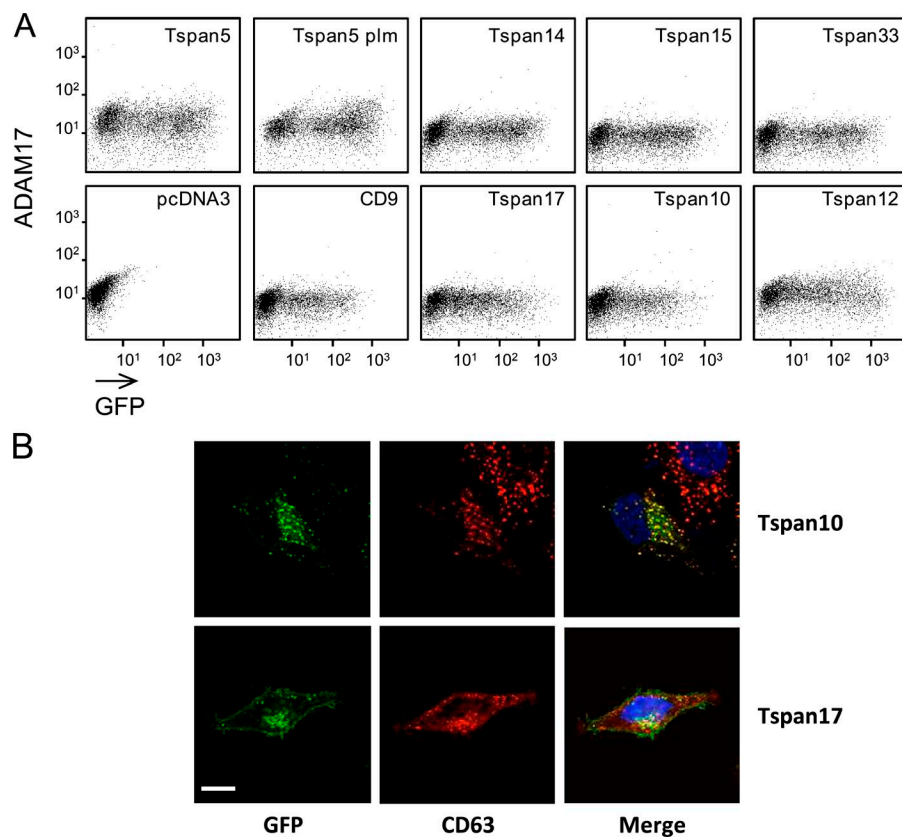

Figure S4. **Effect of TspanC8 tetraspanins on ADAM17 surface expression and codistribution of Tspan10 and Tspan17 with CD63.** (A) Flow cytometry analysis of the surface expression of ADAM17 in HeLa cells transiently transfected with different GFP-tagged tetraspanins. (B) Confocal microscopy analysis of GFP-tagged Tspan10 and Tspan17 (green) and CD63 (red) localization (red) in permeabilized HeLa cells. Bar, 10  $\mu$ m. These experiments were performed at least twice.
