Griffiths et al., Vol. 95, No. 3, December 1982

Page 785, Figs. 3-7 should have appeared as follows:

FIGURES 3-7 BHK cells labeled with RCA. The outside surface of the plasma membrane (PM) was heavily labeled, whereas the rough ER was unlabeled. \times 60,000. Figs. 4-7: BHK cells labeled with RCA. In all cases the Golgi stacks were preferentially labeled on one side. The unlabeled side is marked as the cis side (c) (see text). In Fig. 4, a secondary lysosome (Ly) near the trans side of the Golgi complex was labeled. In Fig. 7, the outer surface of plasma membrane (PM) was heavily labeled. Fig. 4, \times 55,000; Fig. 5, \times 91,000; Fig. 6, \times 55,000; Fig. 7, \times 64,000.
