In the article entitled, "Idiotypes on major histocompatibility complex-restricted virus-immune cytotoxic T lymphocytes," by Ursula R. Kees, June 1981, **153**:1562, Figs. 2 and 3 were inadvertently switched. The correct figures appear below.

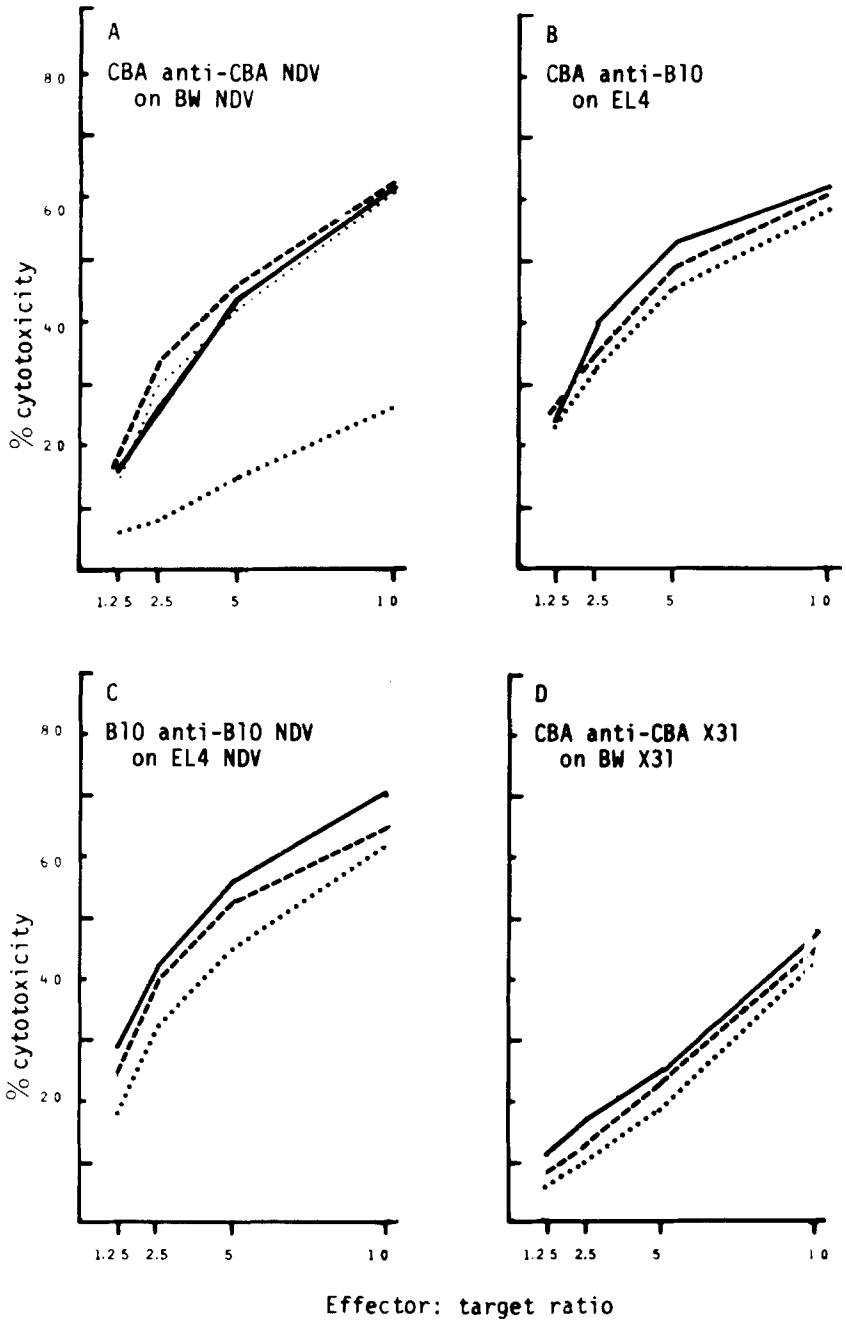

FIG. 2. Virus specificity of NDV- and X31-immune CTL. CBA anti-CBA NDV CTL (---) and CBA anti-CBA X31 CTL (—) were assayed on NDV-infected L929 target cells (left panel) and on X31-infected L929 target cells (right panel).

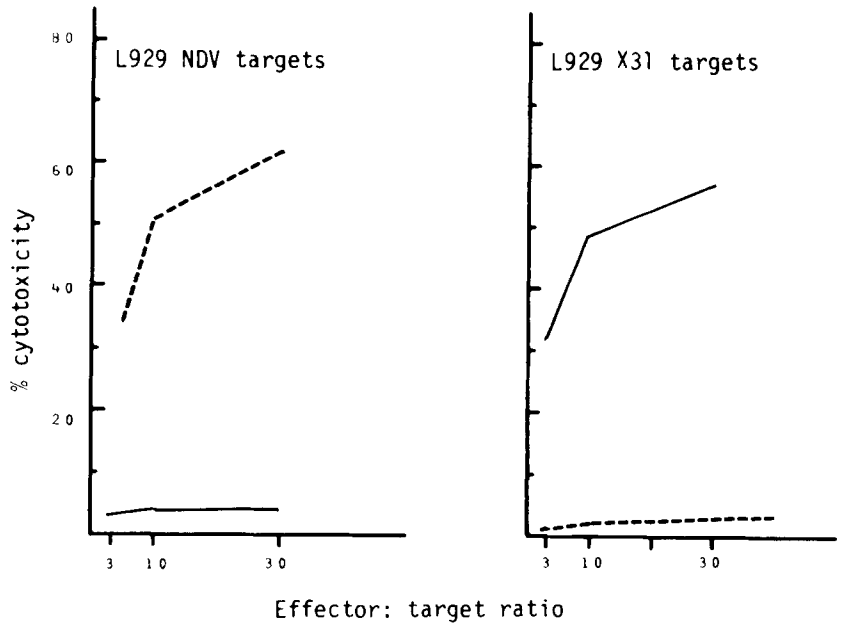

FIG. 3. Cytotoxicity of four different CTL populations tested on appropriate target cells after treatment with anti-id serum CBA-113 and complement (• • •), NMS and complement (– – –), serum CBA-113 alone (• • •), or left untreated (—).
