

**FIGURE 6.** Immunoprecipitation of  $^{125}\text{I}$ -labeled surface proteins from granulocytes. Triton X-100 lysates of each individual's  $^{125}\text{I}$ -labeled granulocytes were immunoprecipitated with a mixture of five different anti-LFA-1  $\alpha$  mAb (lane 1), anti-LFA-1  $\alpha$  TS1/22 mAb-Sepharose CL-4B (lane 2), anti- $\beta$  TS1/18 mAb-Sepharose (lane 3), anti-OKM1 mAb (lane 4), or anti-CR1 44D mAb (lane 5). Precipitates were subjected to SDS-7% PAGE and autoradiography.
