

In the article "Point mutations cause the somatic diversification of IgM and IgG2a antiphosphorylcholine antibodies" by N.C. Chien, R.R. Pollock, C. Desaymard, and M.D. Scharff (March 1988, 167:954), the C<sub>κ</sub> sequence contains errors. As reported in the text, the correct sequence is germline but was transposed incorrectly in preparing Fig. 4 for publication. The error does not affect the interpretation or conclusion.
