

In the article "Detection of interleukin 8 and tumor necrosis factor in normal humans after intravenous endotoxin: the effect of antiinflammatory agents" by G.D. Martich, R.L. Danner, M. Ceska, and A.F. Suffredini (April 1991, 173:1021), errors were made on page 1022 in the first paragraph of Results.

The text as printed read: "The total granulocyte count in all 25 subjects decreased from baseline ($3,781 \pm 219 \times 10^9/\text{L}$), to a nadir at 1 h ($1,156 \pm 82 \times 10^9/\text{L}$), rising by 6 h to $9,722 \pm 822 \times 10^9/\text{liter}$ granulocytes and approached baseline values by 24 h ($6,897 \pm 537 \times 10^9/\text{L}$)."

The correct text reads: "The total granulocyte count in all 25 subjects decreased from baseline ($3.8 \pm 0.2 \times 10^9/\text{L}$), to a nadir at 1 h ($1.2 \pm 0.8 \times 10^9/\text{L}$), rising by 6 h to $9.7 \pm 0.8 \times 10^9/\text{liter}$ granulocytes and approached baseline values by 24 h ($6.9 \pm 0.5 \times 10^9/\text{L}$)."
