

In the article "Enhancement of human immunodeficiency virus type 1 infection by antisera to peptides from the envelope glycoproteins gp120/gp41" by S. Jiang, K. Lin, and A. R. Neurath (December 1991, 174:1557), the legend to Figure 2 was accidentally omitted by the printer. The figure and legend appear below.

**Figure 2.** Antibody dose dependence of enhancement of HIV-1<sub>IIIIB</sub> infection. Six rabbit antisera with virus-enhancing activity directed against the indicated sequence within gp120/gp41 were selected as examples. The enhancement of P24 production was determined and calculated as for Fig. 1 A.
