

In the article "Selective enrichment of major histocompatibility complex class II-specific autoreactive T cells in the thymic Thy0 subset" by I. Kariv, R. R. Hardy, and K. Hayakawa (May 1993, 177:1429), Table 1 was printed incorrectly. The correct version of Table 1 and its legend appear below.

Table 1. *A High Frequency of Autoreactive T Cells in Thy0 Detectable by MLR Assay*

CD4 ⁺	subsets	IL-3 ⁺ wells			
		1 cell/well		10 cells/well	
		AMLR	anti-CD3	AMLR	anti-CD3
		%			
Thymus	Thy0	37	97	96	100
Thymus	Fr. I'	<1	95	2	100
Spleen	Fr. I	ND	ND	1	100
Spleen	Fr. III	ND	ND	8	100

96 wells (either 1 or 10 cells/well) were cultured per each sample group. Positive for IL-3 presence (IL-3⁺) was scored as wells showing >0.05 OD level. By anti-CD3 stimulation, most samples yielded OD ~1.0 irrespective of responder cell numbers.
