

Transforming growth factor β is dispensable for the molecular orchestration of Th17 cell differentiation

Jyoti Das, Guangwen Ren, Liying Zhang, Arthur I. Roberts, Xin Zhao, Alfred L.M. Bothwell, Luc Van Kaer, Yufang Shi, and Gobardhan Das

Vol. 206, No. 11, October 26, 2009. Pages 2407–2416.

The authors overlooked a recent publication by Santarasci et al. (*Eur. J. Immunol.* 2009. 39: 207–215). That study showed that TGF β was not essential for the development of Th17 cells from naive human CD161 $^{+}$ CD4 $^{+}$ cells from umbilical cord blood, but the cytokine favored the expansion of Th17 cells due in part to its suppressive effect on Th1 cell development. The authors apologize for this unintentional oversight.
