

Marín, R., and J.F. Hoffman.

*The Journal of General Physiology*. Volume 104, No. 1, July 1994.

Pages 1–32 and 33–55.

The authors wish to bring to the attention of the readers the fact that the standard errors reported in the above-referenced articles are far smaller than could be expected from the variability of the counted radioactivity, even though the reported numbers are correctly calculated. This raises the question of whether or not the differences produced by ouabain as reported are significant. The authors are currently pursuing further studies where they hope to clarify the issue raised.
