Due to an editorial error, a  $\theta$  value in the right column appears as a  $\tau$  value. The corrected sentence is given here:

Application of Eq. 4, assuming that only  $\theta_0$  changes upon mutation and using a  $\sigma$  value of  $200 \text{ s}^{-1}$ , yields  $\tau_o$  values of 3.7 and 2.2 ms for the  $\beta\text{S4I}$  and  $\epsilon\text{S4I}$  mutant receptors, respectively.
